- A) Maximizing benefits and minimizing possible harm
- B) Fairness in the distribution of benefits
- C) Ensuring adequacy of follow-up systems
- D) Treating individuals as autonomous beings

3) Definitions: Drag and drop

Blinded Review = Researchers names are not available to expert analysts

Replication= Research that yields comparable results

Magnet Status = Organizational commitment to research and nursing excellence

Peer Review = Research reviewed by experts in the field of study

- 4) The nurse in a mental health setting is conducting research with a healthcare provider about the effects of family dynamics on readmission rates. Which factor is most important when selecting participants?
- A) Informed Consent
 - B) Offer Amazon gift cards for participation
 - C) Ask staff members to recruit willing participants
 - D) Place a flyer about the research in a common location so that all clients have an equal opportunity to participate.
- 5) The community health nurse is working on a teaching session about smoking cessation and is looking to for evidence based practice related to this teaching. Which statement best describe the nature of the research materials that should be selected by the nurse?
- A) A book that describes anecdotal experiences of 4 clients who stopped smoking for more than 10 years
 - B) Internet articles discussing smoking cessations strategies
 - C) A peer-reviewed article discussing clinical traits that studied the effectiveness of patches on long-term smoking cessation on 1,000 clients
 - D) A health care provider's notes that summarized group members responses during a smoking cessation support session

6) The nurse researcher takes steps to protect identifiable personal information in the research study. Which information will the nurse ensure remains confidential? SATA

- A) Fax number
- B) Telephone number
- C) Internet protocol (IP) address
- D) Number of Children
- E) Email Address

7) The nurse involved in the research process has identified the problem to be researched.

Which is the next step in the research process?

- A) Evaluate the data gathered
- B) Choosing a theoretical Framework
- C) Conduct the research
- D) Select research participants

8) Which are NOT scholarly sources? SATA

- A) Government websites
- B) Peer-reviewed journals
- C) Blogs
- D) Wikipedia
- E) .com websites

- 9) Which definition BEST describes full disclosure about the research project?
- A) Revealing information that is available to the participant even if the information provided will impair the validity of the research.
 - B) Explain to the participant that analysis decisions will be made after the data have been collected
 - C) Explain the risks and let the participant reveal the benefits after the treatment
 - D) Providing details available to facilitate informed consent
- 10) The nurse is planning to get involved in research at the organizational level. Which is the most significant barrier the nurse needs to consider before committing to a research project?
- A) Software use
 - B) The time required for research
 - C) Lack of research participants
 - D) Adequate leadership support
